

all input filters selection shall be reflected in portal report output

this report output extraction shall have two view and therefore two tabs, one for interface availability and one for node availability, and based on selection of node, whether all nodes or a particular node, the report output will reflect accordingly, below are two examples for clarity

and based on filter selection of time in GUI: 1 D, 1 W, 1 M, 2 M, 6 M, 1 Y or calendar selection, the data will populate accordingly, and value in report output will have same value

**Example (1): Selection Node All**  
first excel tab called "interface level"
